"Fauna lepidopterologica Volgo-Uralensis" 150 years later: changes and additions. Part 2. Bombyces and Sphinges

(Insecta, Lepidoptera)

by

VASILY V. ANIKIN, SERGEY A. SACHKOV & VADIM V. ZOLOTUHIN received 24.II.2000

Summary: 309 species belonging to 21 families of Bombyces et Sphinges are listed for the modern Volgo-Ural fauna. 12 species (Sesia philantiformis, Jordanita tenuicornis, Adscita manni, Zygaena trifolii, Z. occitanica, Phragmataecia territa, Amata phegea, Euchampsonia cristata, Phalera bucephaloides, Mirina christophi, Hemaris croatica, Hyles nicaea and, probably, Holoarctia puengeleri) are deleted from the list. They were either erroneously determinated or have disappeared (Hemaris croatica) since Eversmann's work. 129 species are recorded for the region in addition to Eversmann's list.

This paper is the third in a series of publications dealing with the composition of the presentday fauna of the Heterocera moths of various families, the so-called Bombyces et Sphinges, in the Middle Volga and the south-western Cisurals. This region comprises the administrative divisions of the Astrakhan, Volgograd, Saratov, Samara, Uljanovsk, Orenburg, Uralsk and Atyraus (= Gurjev) Districts, together with Tataria and Bashkiria. Two exceptions to the general interpretation of the complex "Bombyces et Spinges" are made in this paper: the Thyrididae are deleted and they will be considered in a following part together with the Pyraloidea and the Pterophoroidea, but the Brachodidae are included and brought together with the Sesioidea. As was accepted in the first part of the cycle, only material reliably labelled, and covering the last 20 years was used for this study. The main collections are those of the authors: V. ANIKIN (Saratov and Volgograd Districts), S. SACHKOV (Samara District) and V. ZOLOTUHIN (Uljanovsk district and southern Tataria). For the same districts we also made use of literature data, i. e. Astrakhan district (Lvovsky, 1971), Bashkiria (GROSSER, 1983, 1987) and Uralsk district (AJBASOV, 1974; KUZNETSOV & MARTYNOVA, 1954). All the data from the 19th and early 20th century were taken into account but only as a reference (BECKER, 1854-66; CHRISTOPH, 1867, 1868; Gross, 1925; Jakovlev, 1861). Whilst compiling this list we also took advantage of the information from recent papers on this region (KUMAKOV & KORSHUNOV, 1979; ANIKIN, 1990; Sachkov, 1983; Krasnobayev & Sachkov, 1990; Sachkov & Lyashenko, 1990; Zolotuhin, 1995; EFETOV, 1998) and monographs on a fauna of the USSR (KOZHANTSHIKOV, 1950, 1956) or the Palaearctic (Obratzsov, 1966; de Freina, 1997), which was in part critically reviewed and revised. The material in the collections of the Zoological Institute of the Russian Academy of Sciences at St. Petersburg, Moscow and Kiev Universities was also examined for our study. Also the private collections of A. & V. IsaJevs (Uljanovsk), V. Kupayev (Samara) and D. Komarov (Volgograd) could be studied, to whom we express our sincere thanks. We also owe special thanks to the curators of the lepidoptera collections at the institutions listed above - namely to

¹ Part 1: Atalanta (1993) **24** (1/4): 89–120; part 4: Atalanta (1999) **29** (1/4): 295–336.

E. M. ANTONOVA (Moscow), I. Yu. Kostyuk (Kiev) and A. L. Lvovsky (St.Petersburg) for their help to our work with the museum collections. Special thanks also due to K. A. Efetov (Simferopol), O. G. Gorbunov (Moscow) and Axel Kalles (Berlin) for their valuable advices concerning the taxonomy, nomenclature and foodplants of Zygaenidae and Sesiidae.

In the article we follow those systems that were proposed for Psychidae by SAUTER & HAETTEN-SCHWILLER (1991), with changes; for Zygaenidae by Efetov (1992—Procridinae) and by NAU-MANN et al. (1984—Zygaeninae); for Sesiidae by O. Gorbunov (pers. comm.); for Notodontidae by SCHINTLMEISTER (1991 [1992]), for other families by DE FREINA & WITT (1987, 1990), with changes. We consider this variant of the system much more natural than a system which was proposed by different authors in the modern catalogue of european lepidoptera (eds: RAZOWS-KI & KARSHOLT, 1996). It is that their system was not used here.

For the ease of use, information is given in the form of a table, with the principal data on all species mentioned for the Volgo-Ural region. Many localities have been renamed during the last 150 years, the most important ones being listed below:

Orenburg - later Chkalov - now Orenburg

Samara - later Kuybyshev - now Samara

Simbirsk - now Uljanovsk

Sarepta - now Krasnoarmeisk of the Volgograd District

Waskuntschatskoi – usually noted as Baskunchak (Astrakhan District)

Zarizyn or Tsarizyn - later Stalingrad - now Volgograd.

Note: Spassk, usually interpreted as EVERSMANN's estate not far from Orenburg, really might be also a town being flooded under the Volga's water during the erection of hydro-electric power stations and following increasing water levels. Before that Spassk had been situated at about 82 km ESE of Kasan on the left bank of the Volga.

Notes on the table and maps

Column 1: Species number

species is deleted from the list

Column 2: Species name

Column 3: Species listed by EVERSMANN (1844) within the regional limits of that paper

Column 4-10: Administrative units

- 4 Astrakhan District (centre is Astrakhan)
- 5 Volgograd District (Volgograd)
- 6 Saratov District (Saratov)
- 7 Samara District (Samara)
- 8 Uljanovsk District (Uljanovsk)
- 9 Bashkiria (Ufa)
- 10 Uralsk District (Uralsk)
- + species is present
- species not found during period of this study
- ? species is known from old or doubtful data
- o type locality
- ø species now unknown in its type locality

Column 11: Flight periods

IV-XI - months

b, m, e - beginning, middle, end of month

1 (2) G - species develops 1 (2) generation(s)

Column 12: Comments and larval foodplants

L larval foodplants, *indicating original data

TL type locality

	Endromididae			
153.	Endromis versicolora Linnaeus, 1758	+ + + +	+ - eIII-mV in 1 G	Light birch forests and parks, rare and local. L: Betula pendula*.
	Mirina christophi Staudinger, 1887			Known only after 1 of from the Bashkirian reserve (DAYANOV, 1981); maybe it is a chance finding. L: Lonicera, Veigela.
	Saturniidae			
	Agliinae			
154.	Aglia tau Linnaeus, 1758	+ + + + -	+ - V in 1 G	Light birch groves, not rare but local. L: <i>Betula, Alnus*</i> .
	Saturniinae			
155.	Saturnia pyri Linnaeus, 1758		+ bV in 1 G	Rare and local in parks, gardens and forests plantations. L: Malus*, Armeniacus*.
156.	Eudia spini Denis & Schiffermüller, 1775		+ V in 1 G	Very rare and local in steppes of Uralsk Distr. In Volgograd Distr. the larvae were found local but very common on chalk hills (A. DANT-SCHENKO, pers. comm.). L: Rhamnus cathartica*, Prunus, Rosa, Ulmus, Salix, Crataegus.
157	Eudia pavonia Linnaeus, 1761	+ + + + ·	+ + V-VI in 1 G	Was cited by E. as <i>Carpini</i> . Rare and local in forest-steppes. L: <i>Spiraea*</i> , <i>Salix</i> , <i>Amygdalus*</i> , <i>Cerasus</i> , <i>Betula</i> .
	Notodontidae			
	Cerurinae			
158.	Cerura vinula Linnaeus, 1758		+ V-VII in 1 G	Everywhere but not common. L: <i>Salix</i> spp*, <i>Populus</i> *.
159.	Cerura erminea Esper, 1783		~ V-VI in 1 G	Common in old humid mixed and deciduous forests. L: <i>Populus balsamifera</i> *.
160.	Cerura intermedia Тысн, 1896	?	V-VIII in 2 G	Single findings from the Astrakhan Distr. L: <i>Populus</i> spp.
161.	Cerura przewalskyi Alpheraky, 1882		+ V-VIII in 2 G	Single findings from the Uralsk Distr. L: <i>Populus</i> spp., <i>Salix</i> spp.

1	2	3	4	5	6	7	8	9	10	11	12
162.	Furcula furcula CLERCK, 1759	+		+	+	+	+	+	+	V-VIII in 2 G	Was cited by E. as <i>Forficula</i> . Not rare but local in deciduous forests. L: <i>Salix</i> spp., <i>Populus</i> spp.
163.	Furcula bicuspis Borkhausen, 1790			+	+	+	+	+	-	V-VIII in 2 G	Not rare but local in mixed and deciduous forests. L: Salix*, Betula*.
164.	Furcula bifida Вканм, 1787				+	+	+	+	+	V-mVIII in 2 G	Rare and local in deciduous forests and forest-steppes. L: <i>Populus tremula*</i> .
165.	Furcula interrupta Сняізторн, 1867								-	V-VIII in 2 G	Rare in flood-forests. L: Salix ssp.
166.	Furcula aeruginosa Christoph, 1873								+	V-VIII in 2 G	Not rare in forests along rivers.
167.	Stauropus fagi Linnaeus, 1758									V-VII in 1 G	Not rare but local in humid mixed forests mainly. L: <i>Corylus*</i> , <i>Quercus, Betula</i> .
168.	Harpyia milhauseri Fabricius, 1775									IV-VI in 1 G	Very rare in forest-steppes. L: <i>Quercus</i> . A partial 2. generation is also possible in eVII-mVIII (Volgograd Distr.)
	Euchampsonia cristata Butler, 1877									18.VII. 1993	One fresh & was caught on a road in a deciduous forest of the Zhiguli Preserve. We note this sinopacific species but do not include it in the list because the finding is only a chance one (see also comments under Mirina christophi).
169.	Dicranura ulmi Denis & Schiffermüller, 1775								+	IV-V in 1 G	Very common in forest-steppes and in forest along rivers in the steppe zone. L: <i>Ulmus</i> .
	Notodontinae										
170.	Notodonta dromedarius Linnaeus, 1758				+	+	+	+	-	V-bIX in 2 G	Everywhere. L: Betula*, Salix*.
171.	Notodonta torva Hüвner, 1803									V-VIII in 2 G	Single findings in Uljanovsk. L: <i>Populus, Betula</i> .
172.	Notodonta ziczac Linnaeus, 1758			+	+	+	+	+	+	V-bIX in 2 G	Everywhere, very common. L: Betu- la*, Malus*, Populus*, Salix*, Tilia*.
173.	Notodonta tritopha Denis & Schiffermüller, 1775	+		+	+	+	+	+	+	V-VIII in 2 G	Everywhere but rare. L: <i>Populus, Salix</i> .
174.	Peridea anceps Goeze, 1781				+	+	+	+		V in 1 G	Rare and local in deciduous and mixed forests. L: Quercus, Betula.
175.	Drymonia dodonaea Denis & Schiffermüller, 1775			÷	+	+	+	+	-	V-VII in 1 G	Not rare in deciduous and mixed forests. L: <i>Quercus, Betula</i> .
176.	Drymonia ruficornis Hufnagel, 1766									IV-VI in 1 G	Was cited by E. as <i>Chaonia</i> . Rare in mixed forests. L: <i>Quercus</i> .
177.	Drymonia querna Denis & Schiffermüller, 1775	4								V-VIII in 1-2 G	Very local in old humid mixed forests. L: Quercus.

1	2	3	4	5	6	7	8	9	10	11	12
178.	Pheosia tremula CLERCK, 1759	+		+	+	+	+	+	+	V-IX in 2 G	Was cited by E. as <i>Dictaea</i> . Everywhere common.
179.	Pheosia gnoma FABRICIUS, 1777									V-VIII in 2 G	Very local in mixed old forests. L: Salix*, Populus*.
180.	Pterostoma palpinum CLERCK, 1759			+	+	+	+	+	+	V-VIII in 2 G	Everywhere common. L: <i>Salix*</i> , <i>Populus*</i> .
181.	Ptilophora plumigera DENIS & SCHIFFERMÜLLER, 1775								-	IX-XI in 1 G	Rare and local in deciduous old forests. L: <i>Acer</i> .
182.	Ptilodon capucina Linnaeus, 1758	+	+	+	+	+	+	+	+	V-VIII in 2 G	Was cited by E. as Camelina. Everywhere common, especially in light oak-forests. L:Quercus*, Tilia*, Betula*.
183.	Ptilodon cucullina Denis & Schiffermüller, 1775								-	V-IX in 2 G	Rare and local in mixed and deciduous forests. L: Acer, Quercus, Ulmus.
184.	Leucodonta bicoloria Denis & Schiffermüller, 1775				+	+	+	+	-	V-VI in 1 G	Rare and local in light deciduous forests. L: <i>Betula</i> .
185.	Odontosia carmelita Esper, 1790									III-bIV in 1 G	Rare and very local in deciduous forests, the birch groves mainly. L: <i>Betula</i> .
186.	Spatalia argentina Denis & Schiffermüller, 1775								-	V-VIII in 2 G	Very rare and local in mixed and deciduous forests. L: <i>Quercus</i> .
187.	Gluphisia crenata Esper, 1785				+	+	+	+	-	V-VIIÍ in 2 G	Not rare in humid mixed and deciduous forests. L: <i>Populus, Salix</i> .
	Pygaerinae										
188.	Pygaera timon Hübner, 1803				+	+	+	+	-	VI-VII in 1 G	Very local and rare in old mixed and deciduous forests of the taiga-type. L: <i>Populus tremula</i> .
189.	Clostera anachoreta Denis & Schiffermüller, 1775								+	V-VIII in 2 G	Not rare everywhere. L: <i>Populus*, Salix*</i> .
190.	Clostera curtula Linnaeus, 1758		+	+	+	+	+	+	+	V-VIII in 2 G	Common everywhere. L: <i>Populus*</i> , <i>Salix*</i> .
191.	Clostera anastomosis Linnaeus, 1758									V-VIII in 2 G	Common everywhere. L: <i>Populus*</i> , <i>Salix*</i> .
192.	Clostera pigra Hufnagel, 1766			+	+	+	+	+	+	V-VIII in 2 G	Was cited by E. as <i>Reclisia</i> . Rare and local in mixed, deciduous and flood-forests. L: <i>Populus*, Salix*</i> .
	Phalerinae										
193.	Phalera bucephala Linnaeus, 1758								+	V-VIII in 2 G	Everywhere common. L: Malus*, Betula*, Quercus*, Populus balsamifera*, P.nigra*, Salix*, Tilia*

1	2	3	4	5]	6	7	Ø	9	10		12
	Phalera bucephaloides Ochsenheimer, 1810	+		?	?					V-VIII in 1 G	recorded by E. from "circa Sareptam", and by Kumakov & Korshu- Nov (1979) from Saratov Distr., but these notes are erroneous, this Caucasian species being absent from the region under study.
	Epiplemidae										
194.	Eversmannia exornata Eversmann, 1837									VII in 1 G	Described from Kazan, this species was mentioned from the region only once—from Saratov District (KRULIKOVSKY, 1902).
	Drepanidae										
195.	Falcaria lacertinaria Linnaeus, 1758									V-VIII in 2 G	Rare in humid mixed forests. Was cited by E. as Lacertula. L: Alnus, Betula.
196.	Watsonalla binarìa Hufnagel, 1767									V-bVII in 1-2 G	Very local in light deciduous forests and forest-steppes. Was cited by E. as Hamula. L: Quercus robur*, Alnus.
197.	Drepana falcataria Linnaeus, 1758			+	+	+	+	+	+	eV-VIII in 2 G	Everywhere common. Was cited by E. as Falcula. L: Betula* , Alnus.
198.	Drepana curvatula Borkhausen, 1790								-	V-VIII in 2 G	Rare in old mixed forests. L: Alnus, Betula, Salix.
199.	Sabra harpagula Esper, 1786					+	+	+	-	V-VIII in 2 G	Rare in old humid forests, mixed ones mainly. L: Tilia, Quercus, Alnus, Betula.
200.	Cilix glaucata Scopoli, 1763								-	eIV-bIX in 2-3 G	Rare and local in light mixed and deciduous forests. L: <i>Prunus, Crataegus</i> .
	Thyatiridae										
	Thyatirinae										
201.	Thyatira batis Linnaeus, 1758			+	+	+	+	+	-	V-VI in 1 G	Mixed and deciduous forests, not rare. L: Rubus idaeus*.
202.	Habrosyne pyritoides Hufnagel, 1766				+	+	+	+	-	VI-bVIII in 1 G	Was cited by E. as <i>Derasa</i> . Mixed and deciduous forests, rare. L: <i>Rubus</i> .
	Tetheinae										
203.	Tethea or GOEZE, 1781				+	+	+	+	-	V~IX in 2 G	Common everywhere. L: <i>Populus*</i> , <i>Salix*</i> .
204.	Tethea ocularis LINNAEUS, 1767	+	+	+	+	+	+	+	-	V-VIII in 2 G	Was cited by E. as Octogesima. Everywhere not rare. The ssp. sareptensis Spuler with intensive rose-violet coloration is native from dry and hot places of the Lower Volga. L: Populus*.

233.	Meganola albula Denis & Schiffermüller, 1775		+		+		+		-	eVI-VII in 1 G	Very local in forest-steppes and flood forests. L: Rubus, Fragaria, Mentha, Potentilla.
234.	Meganola strigula Denis & Schiffermüller, 1775			+	+	+	+	+	-	eVI-VII in 1 G	In humid forests, common. Was cited by E. as <i>Hercyna Lineolalis</i> . L: <i>Quercus, Prunus, Tilia</i> .
	Arctiidae										
	Lithosiinae										
235.	Thumatha senex Hübner, 1808								-	bVII-bVIII in 1 G	Forests of various types, meadows, not rare. L:Peltigera, Homalothecium, Dicranoweisia, Jungermannia.
236.	Miltochrista miniata Forster, 1771			+	+	+	+	+	-	eVI-VII in 1 G	Was cited by E. as <i>Rosea</i> . Humid deciduous and mixed forests, not rare. L: lichens on trees.
237.	Cybosia mesomella Linnaeus, 1758			+	+	+	+	+	+	eVI-VII in 1 G	Was cited by E. as <i>Eborina</i> . Common in forests. L: <i>Jungermannia</i> , <i>Parmelia</i> .
238.	Pelosia muscerda Hufnagel, 1766				+	+	+	+	-	VII-bVIII in 1 G	Not rare in deciduous and mixed forests. L: Lichens.
239.	<i>Pelosia obtusa</i> Herrich-Schäffer, 1847								-	VII-bVIII in 1 G	Rare in humid deciduous forests. L: Lichens.
240.	Atolmis rubricollis Linnaeus, 1758			+	+	+	+	+	-	VII in 1 G	Rare in old light mixed forests. L: Lichens.
241.	Lithosia quadra Linnaeus, 1758			+	+	+	+	?	-	VII in 1 G	Rare and local in mixed and deciduous forests. L: Lichens on trees.
242.	Eilema delpanum Esper, 1787				?	+			-	mVII in 1 G	Rare in mixed forests. L: Lichens.
243.	Eilema griseolum Hübner, 1803								-	eVI-bVIII in 1 G	Common in forests. L: Lichens.
244.	Eilema lurideolum ZINCKEN, 1817				+	+	+	+	+	eVI-bVIII in 1 G	Common in light forests and meadows. L: <i>Populus tremula</i> *, lichens.
245.	Eilema complanum Linnaeus, 1758			+	+	+	+	?	+	eVI-bVIII in 1 G	Common in mixed and deciduous forests. L: Lichens.
246.	Eilema caniolum Hübner, 1808								-	?	Single records from near to Tataria (Kazan) by E.
247.	Eilema palliatellum Scopoli, 1763				?	+	+		-	eVI-bVIII in 1 G	Was cited by E as <i>Unita</i> . Not rare in humid deciduous forests. L: Lichens.
248.	Eilema lutarellum Linnaeus, 1758								+	eVI-bVIII in 1 G	Was cited by E as <i>Luteola</i> . Common in forests and meadows. L: Lichens.
249.	Eilema sororculum Hufnagel, 1766									VI in 1 G	Was cited by E as <i>Aureola</i> . Rare and local in deciduous and mixed forests.
250.	Setina irrorella Linnaeus, 1758						+	+	-	VII in 1 G	Not rare but local in humid forests. L: <i>Parmelia</i> .

1	2	3	4	5	6]	7	8	9	10	11	12
251.	Setina roscida Denis & Schiffermüller, 1775	+			+		+	?	-	VII in 1 G	Rare and local in humid forests. L: <i>Parmelia</i> .
252.	Setema cereola Hübner, 1803								-	?	Nearest records from Tataria (Kazan) by DE FREINA & WITT (1987), should be found in the region.
252					_	_	_	_	_	VI-VIII	Was cited by E. as Grammica. Not
233.	<i>Spiris striata</i> Linnaeus, 1758				•	7	•	•		in 1 G	rare in meadows, forest-steppes and steppes. L: Festuca, Plantago, Hieracium, Artemisia.
254.	Coscinia cribraria Linnaeus, 1758				?	+	+		-	VII in 1 G	Was cited by E. as Cribrum. L: Vaccinium, Genista, Plantago, Taraxacum*.
255.	Ocnogyna parasita Hübner, 1790								-	ellI-bV in 1 G	Very rare and local; known only from single old findings. 22 are wingless. For this species, the ssp. rothschildi A. BANG-HAAS was described in 1912 from the Samara region. L: Gentiana, Plantago, Urtica, Scabiosa.
256.	Lacydes spectabilis Tauscher, 1806								+	IX-X in 1 G	Rare in steppes and semi-deserts; it is possible that it occurs in the region only as a migrant. L: Artemisia spp.*, Brassica (sareptana*, sativa*), Rapaea*, Cucurbita pepo*, Cucumber*.
257.	Utetheisa pulchella Linnaeus, 1758							?	+	V-VIII in 2 G	Was noted by E. as <i>Pulchra</i> . In the region as a migrant in steppes and semi-deserts, rare. L: <i>Myosotis, Echium, Borago</i> .
258.	Chelis maculosa Gerning, 1780				+	+	+	+	+	mVI~ mVIII in 1 G	Not common and local in sandy steppes. In the region ssp. mannerheimi Duponchet, 1836. Sometimes it was recorded from the Urals in the rank of a separate species. L: Galium, Achillea.
259.	Chelis dahurica Boisduval, 1843									12.VII. 1937	Noted only by V. DubatoLov (1988) after 1 specimen from the Bashkiria Reserve.
260.	Micrarctia (Sibirarctia) kindermanni Staudinger, 1867								?	?	Was described from S. Ural (Oren- burg Distr.), should be found in steppe areas of the Uralsk Distr.
261.	Watsonarctia deserta Bartel, 1902 (= Eucharia casta Esper, 1784)								+	V-mVI in 1 G	Was cited by E as Casta. Not com- mon and local in light coniferous forests, forest-steppes and mead- ow-steppes. L: Galium, Achillea.
262.	Phragmatobia fuliginosa LINNAEUS, 1758	+	+	+	+	+	+	+	+	eV-VIII in 2 G	Everywhere common. L: <i>Plantago, Rumex, Taraxacum*, Galium</i> .

1	2	3	4	5	6	7	8	9	10	11	12
263.	Epatolmis caesarea Goeze, 1781	+			?	?	+			V-VI, eVII-VIII in 2 G	Was noted by E. as <i>Luctifera</i> . Very local but not rare in humid meadows and settlements' parks. L: <i>Rubus, Stellaria, Euphorbia, Gallium, Plantago</i> .
264.	Parasemia plantaginis Linnaeus, 1758			+	+	+	+	+	_	V-VII in 1 G	Everywhere but local in humid forests and meadows, rare in steppes. L: Plantago, Silene, Hieracium, Rumex, Taraxacum.
	Holoarctia puengeleri O. Bang-Haas, 1927									?	Two specimens of this species were mentioned from the S. Ural (without exact locality) by PONRY & KULLBERG (1997:61) with reference to a pers. comm. of V. OLSHVANG. This finding is hardly probable from the region under our study and has to be confirmed.
265.	Spilosoma luteum HufNAGEL, 1766			+	+	+	+	+	+	V-VIII in 2 G	Was cited by E. as <i>Lubricipeda</i> . Everywhere common. L: <i>Rubus, Lonicera, Sambucus, Ligustrum, Urtica</i> .
266.	Spilosoma Iubricipedum Linnaeus, 1758	+	+	+	+	+	+	+	+	V-VIII in 2 G	Was cited by E. as <i>Menthastri</i> . Everywhere common. L: <i>Urtica</i> , <i>Lamium, Taraxacum, Mentha, Galium, Polygonum, Rumex</i> .
267.	Spilosoma urticae Esper, 1789	+	+	+	+	+	+	+	+	V-VIII in 2 G	Everywhere but rare. L: <i>Urtica, Mentha, Galium.</i>
268.	Hyphantria cunea Drury, 1773		+	+	?	+			-	mIV-VIII in 2-3G	Was introduced in Europe from N. America; a pest. Its area is slowly expanding to the North and East. L: Malus*, Artemisia, Cerasus, Ulmus, Quercus, Betula, Salix.
269.	Diaphora mendica CLERCK, 1759								+	V-VIII in 2 G	Everywhere but local in parks, forest-steppes and meadows. L: Plantago, Urtica, Rubus, Galium, Taraxacum*, Stellaria media*.
270.	Rhyparia purpurata Linnaeus, 1758			+	+	+	+	+	+	VI-VII in 1 G	Was cited by E. as <i>Purpurata</i> . Rare and local in dry mixed forests, more common in forest-steppes and steppes. L: <i>Cytisus ruthenius*</i> , <i>Spyraea*</i> , <i>Caragana*</i> , <i>Prunus*</i> .
271.	Rhyparioides metelkana Lederer, 1861									VII in 1 G	Noted from the delta of the Volga by Koenig (1985).
272.	Diacrisia sannio Linnaeus, 1758			+	+	+	+	+	+	VI-VII in 1 G	Was cited by E. as <i>Russula</i> . Not rare in dry meadows, steppes and forest glades. L: <i>Galium, Plantago, Urtica, Rumex, Taraxacum</i> .
273.	Hyphoraia aulica Linnaeus, 1758				?	+	+		+	VI-VII in 1 G	Rare and local in meadows and steppes, the chalky ones mainly. L: Achillea, Euphorbia, Potentilla, Hieracium.

1	2	3	4	5	6	7	8	9	10	11	12
274.	Pericallia matronula Linnaeus, 1758	+			?	+	+	+	+	eVI-VII in 1 G	Very local and rare in humid decid- uous forests and on bogs. L: <i>Hie-</i> racium, Vaccinium, Leontodon*.
275.	<i>Arctia caja</i> Linnaeus, 1758	+	+	+	+	+	+	+	+	eVI-VII in 1 G	Everywhere common. L: <i>Tilia*, Betula*, Salix*, Fragaria*</i> , etc.
276.	Arctia flavia Fuessty, 1779	+		+	+	+	+	?	-	mVII- mVIII in 1 G	Rare and local in dry coniferous forests, more rare in mixed ones and in forest-steppes. L: <i>Taraxacum</i> , <i>Urtica</i> , <i>Leontodon</i> .
277.	Epicallia villica Linnaeus, 1758								+	mVI-VII in 1 G	Everywhere not rare. L: Plantago*, Taraxacum*, Salix spp.*, Matthiola incana*, Prunus*, Ulmus*
278 _;	Eucharia festiva Huf- NAGEL, 1766 (= Arctia hebe Linnaeus, 1767)				+	+	+	+	+	VI-VII in 1 G	Was cited by E. as <i>Hebe</i> . Rare and local in chalk-steppes and dry coniferous forests. L: <i>Achillea, Thymus, Euphorbia</i> .
279.	Callimorpha dominula Linnaeus, 1758			+	+	+	+	+	-	VI-bVIII in 1 G	Local but not rare in light deciduous and mixed forests and on meadows. L: Betula*, Sorbus*, Urtica, Rubus, Salix.
280.	Euplagia quadripunctaria PODA, 1761.(= Callimorpha hera LINNAEUS, 1767)			+	+	+	+	+	+	VII-VIII in 1 G	Was cited by E. as Hera. Local and not common in forest-steppes and steppes. L: Lamium, Stachys, Rubus, Epilobium.
281.	Tyria jacobaeae Linnaeus, 1758								+	eV-bVII in 1 G	Local but not rare in steppes and meadow-steppes. L: Senecio jacobaea*, Petasites*.
	Syntomidae										
282.	Dysauxes ancilla Linnaeus, 1767								+	eVI-VII in 1 G	Not rare in humid deciduous forests. L: <i>Taraxacum, Plantago, Lactuca.</i>
283.	Dysauxes punctata Fabricius, 1781	+	+	+	+	+	+	+	+	eVI-VII in 1 G	Rare and local in mountain steppes and in forest-steppes, in humid plots mainly.
284.	Amata nigricornis Alpheraky, 1883	+	?	+	+	+	+	+	+	bVII-bVIII in 1 G	Cited by E.as <i>Phegea</i> . Everywhere common. L: <i>Plantago*</i> .
285.	Amata caspia Staudinger, 1877								+	VI-bIX in 1-2 G	Common and not rare in flood- forests, meadows, sandy plots.
286.	Amata transcaspica Obratzsov, 1966								0	eV-bVII in 1 G	Known only from the type series from the Uralsk region.
287	Amata turgaica Obratzsov, 1966								0	VI-VIII in 1 G	Known only from the type series from the Uralsk region.
_	Amata phegea Linnaeus, 1758										All records of Amata phegea (as Syntomis) from the region apply in fact to A. nigricornis.

1	2	3	4	5	6	7	8	9	10	11	12
	Sphingidae										
	Sphinginae										
288.	Agrius convolvuli Linnaeus, 1758								+	V-VI, VIII-IX in 2 G	Everywhere as migrant. L: Convolvulus arvensis*.
289.	Acherontia atropos Linnaeus, 1758								+	VI, eVII-IX in 2 G	Everywhere as migrant but rare. L: <i>Soianum tuberosum</i> *.
290.	Hyloicus pinastri Linnaeus, 1758			+	+	+	+	+	-	eV-VI in 1 G	Coniferous and mixed forests. L: <i>Pinus sylvestris</i> *.
291.	Sphinx ligustri Linnaeus, 1758	+	+	+	+	+	+	+	+	eV-bVII in 1 G	Everywhere but more common as larvae in settlements with young plantations of lilac. L: Syringa*, Ligustrum*, Fraxinus*, Robinia pseudoacacia*.
	Smerinthinae										
292.	Smerinthus ocellatus Linnaeus, 1758	+	+	+	+	+	+	+	+	V-VI; VIII in 2 G	Everywhere. L: Malus domesticus*, M.sylvestris*, Populus nigra*, P. balsamifera*, Salix alba*.
293.	Smerinthus caecus Menetries, 1857							+	-	?	Very rare and local in mixed and deciduous forests of the taiga-type. L: <i>Salix</i> ssp.
294.	Laothoe populi Linnaeus, 1758	+	+	+	+	+	+	+	+	V-eVII in 1 G	Everywhere. L: <i>Populis nigra*, P. balsamifera*, P. tremula*</i> , young and low plants mainly.
295.	Laothoe amurensis Staudinger, 1892				+	+	+	+	-	VI-bVII in 1 G	Rare in old humid mixed and deciduous forests of the taiga-type. L: <i>Populis tremula*</i> .
296.	Mimas tiliae Linnaeus, 1758			+	+	+	+	+	+	V-bVII in 1 G	Everywhere. L: Tilia cordata*, Betula pendula*.
297.	Marumba quercus Denis & Schiffermüller, 1775								-	V-bVII in 1 G	Light dry oak-forests , rare and lo- cal. L: <i>Quercus robur*</i> , young and low plants mainly.
	Macroglossinae										
298.	Hemaris fuciformis Linnaeus, 1758			+	+	+	+	+	+	eV-bVIII in 1 G	Was cited by E. as Bombyliformis. Everywhere. L: Lonicera tataricum*, L. xylosteum*.
299.	Hemaris tityus Linnaeus, 1758			+	+	+	+	+	+	V-VI in 1 G	Was cited by E. as Fuciformis. Steppes, chalky plots, dry forest- steppes, local. L: Knautia arvensis*, Scabiosa ochroleuca*.

1	2	3	4	5	6	7	8	9	10	11	12
	Hemaris croatica Esper, 1779	+	<u></u> _1	?	?	-	<u> </u>	<u>-51</u>	?	- ''	There are many old collection specimens from Sarepta, Saratov, Samara, Kazan and the outskirts of Uralsk, but recently this species disappeared from the region so we delete it from the list. According to V. Dubatolov (pers. comm.), this remarkable species was recently found in the steppes of Orenburg Distr.
300.	Macroglossum stella- tarum Linnaeus, 1758	+	+	+	+	+	+	+	+	VI-IX in 2-3 G	Everywhere, first generation as migrants. L: Galium, Stellaria, Rubia.
301.	Sphingonaepiopsis gor- goniades Hübner, 1819						?		+	V-VIII in 2 G	Was cited by E. as <i>Gorgon</i> . Very rare in steppes. L: <i>Galium</i> .
302.	Proserpinus proserpina Pallas, 1772		?	+	+	+	+	+	+	V-VI in 1 G	Was cited by E. as <i>Oenotherae</i> . Local in light mixed and deciduous forests, in steppes and wet meadows. L: <i>Epilobium*</i> , <i>Oenothera*</i>
303.	Daphnis nerii Linnaeus, 1758									VII	Only as migrant. L: Nerium oleander* and occasionally Vinca major.
304.	Hyles euphorbiae Linnaeus, 1758	+	+	+	+	+	+	+	+	V-VI; VII- bIX in 2 G	Dry and light forest-steppes, steppes, chalky slopes, semi-deserts, not rare. L: Euphorbia cyparissias* and other Euphorbia*.
305.	<i>Hyles gallii</i> Rоттемвиrg, 1775	+	+	+	+	+	+	+	+	V-VI; VII- bIX in 2 G	Everywhere and very common. L: <i>Galium</i> *
306.	Hyles livornica Esper, 1780								+	V-VI; VII- IX in 2 G	Was cited by E. as <i>Lineata</i> . As migrant mainly, more common in the southern districts. L: <i>Galium</i> , <i>Linaria</i> , <i>Calligonum*</i> , <i>Zygophyllum*</i> , <i>Vitis*</i> .
307.	Hyles zygophylli Ochsenheimer, 1808									V-VI in 1 G	Rare species of deserts and semi-deserts. L: <i>Zygophyllum</i> *.
308.	Hyles hippophaes Esper, 1793									V-VIII in 2 G	Local, along rivers, in parks where larval foodplants grow. Area is slowly expanding to the North. L: Eleagnus*, Hippophae.
_	Hyles nicaea de Prunner, 1798										The only old specimen from Sarepta in the collection of the Ger- man entomological Institute (Eberswalde) probably bears a wrong label.
309.	Deilephila elpenor Linnaeus, 1758	+	+	+	+	+	+	+	-	eV-mVII in 1 G	Everywhere. L: <i>Epilobium</i> *
310.	Choerocampa porcellus Linnaeus, 1758			?	+	+	+	+	+	eV-VII in 1 G	Everywhere. L: Gallium, Vitis, Epilobium, Oenothera.
	Total - 310	180	73	172	231	193	200	120	148		

As a result, 309 species belonging to 21 families are listed for the modern Volgo-Ural fauna of Bombyces & Sphinges, 12 species (Sesia philantiformis, Jordanita tenuicornis, Adscita manni, Zygaena trifolii, Zygaena occitanica, Phragmataecia territa, Amata phegea, Euchampsonia cristata, Phalera bucephaloides, Mirina christophi, Hemaris croatica, Hyles nicaea and, probably, Holoarctia puengeleri) are deleted from the list. They were either erroneously determinated or have disappeared (Hemaris croatica) since EVERSMANN's work. However, 129 species are recorded for the region in addition to EVERSMANN's list. So, we can suppose that the species compositions of the moths under this study is almost completely known and all further alterations of the list would be caused by taxonomic revisions and changes in status of some taxa.
